		564	The proof map selects the results that connect the semantic layers.
		565	@fig:intro-corpus shows the surrounding formal development as a treemap of
		566	exported Isabelle entities. It groups the declarations by session and theory,
		567	including facts generated by Isabelle's definition packages. The area of a
		568	block therefore measures its share of the exported corpus, not the difficulty
		569	of its proofs. The interactive view links each declaration to its documentation.
		570
